SUMMARY

Throughout my career, I have been involved in every stage of a product's lifecycle, from the first prototypes in a startup to its evolution within an international organization. This experience has allowed me to combine hands-on software engineering with a broad view of complex projects, often acting as a bridge between teams to facilitate integration and collaboration. I am open to different technologies and roles, and I am looking for a great team to work with and a project I can truly believe in. I am driven by continuous learning and adapt quickly to new challenges.

SKILLS

Advanced
JavaScript, TypeScript, Solidity
Intermediate
Golang, Java, C++, Python
Frameworks & Libraries
ReactJS, NodeJS, Selenium
DB, DevOps & Tools
Git, Bash, Docker
MySQL, MongoDB, PostgreSQL
AI: Claude, ChatGPT, Copilot

LANGUAGES

English (Intermediate)
Spanish (Native)
Catalan (Native)

WORK EXPERIENCE

Polygon Labs

Sept. 2019 – Jan. 2026

(Iden3 → Hermez Network → Polygon Labs)

- Polygon Labs (2021 - 2026):
 - Member of the **Protocol** Team, defining and implementing core protocol features while acting as a technical reference for their **integration** across multiple teams.
 - Developed critical protocol components, including new features, smart contracts, and the update logic for core data structures (Merkle Trees).
 - Responsible for ensuring protocol **quality** by defining the testing strategy and validation mechanisms required to guarantee compatibility, system correctness, and safe version upgrades. 🔗
 - Developed internal tools and TypeScript libraries to perform sensitive protocol operations safely and provide reusable building blocks for other teams.
- Hermez Network - *Startup acquired by Polygon Labs (~250 M\$)*:
 - Contributed to the growth of the platform by developing key features and stabilizing it into a production stage. 🔗
 - Implemented the **core** transaction validation logic using a **low-level** language ensuring correctness, security, and deterministic execution. 🔗
 - Built the protocol's shared infrastructure in JavaScript/TypeScript, enabling seamless integration across system components.
- Iden3:
 - Built the initial end-to-end proof of concept that later evolved into Hermez Network (Ethereum scaling platform). 🔗
 - Implemented the **React** frontend and the application logic in JavaScript, working across the entire product stack.
 - Member of the small team responsible for building the project's **first functional prototype**.

EDUCATION

Bachelor's Degree in Telecommunications Technologies and Services Engineering. Major in Network Systems

ETSETB - Universitat Politècnica de Catalunya (UPC), 2019

Bachelor's Thesis: *Development of a DApp Using Ethereum and React.*

Designed and implemented a full-stack application using React and Solidity as a proof of concept for a decentralized financial factoring system.
